

The **Ferreras Drill Alignment Tool** is a tool used for guiding a drill through piling foundations for the installation of column caps. The device clamps to the piling on both sides of the column cap and aligns the drill bit properly to efficiently bore through pilings. A true hole is made to perfectly reach the opposite eye bolt hole in the column cap.

- ◆ Provides users with a drilling tool for boring accurate and efficient holes through foundation pilings.
- ◆ Allows contractors to install column caps with ease and convenience.
- ◆ Features a square C-clamp with an adjustable slide arm and interchangeable drill bushings in order to accommodate all types of sizes of foundations pilings.
- ◆ Prevents from damaging a foundation piling by drilling too large of a hole.
- ◆ Saves expensive amounts of time and improves productivity on worksite.
